

Attention AD Teams with Girls who Swam Section 2 Sectionals....

As you know, Section 2 Sectionals was an Observed Meet for a SWIMS Load of Results. There are several things we had to do with the Meet Files prior to loading. As most all swimmers were not entered using their legal names and dates of birth, Mike Coley spent some time editing each swimmer who was USA Swimming registered at the time of the meet so we had correct data. I spend some time editing each schools team information so all had alternate teams of UN-AD (Unattached Adirondack). ALL Results from this meet were loaded as Unattached Athletes, as no one was swimming for their USA Swimming teams. With this being done, I have exported results files (CL2) containing those results of Only the USA Swimming Registered swimmers.

Here is the catch ... All Swimmers are listed as UN-AD.

Team Manager does have the intelligence to match to and only load results of those swimmers and teams who are in your Team Manager database.

**Be absolutely certain to make a Backup of your file first.**

Here are specific instructions to load results for your swimmers only;

There are 3 result files;

A Prelims

B Prelims

AB Finals

If your school is an A School, you will need the A Prelims and AB Finals loaded as separate meets.

If your school is a B School, you will need the B Prelims and AB Finals loaded as separate meets.

The loading of results is Exactly The Same as you would normally do with the following exceptions;

1. You MUST have the team UN-AD in your Teams list - create a team UN, named Unattached and be sure to select AD as the LSC.

2. The swimmers who you want results for MUST be included in your database with correct data (name, date of birth, USA-S ID).

**When loading the results files DO NOT SELECT the "Add New Teams/Athletes" box.**

Team Manager will load only those results where the athlete is already in your file.

Here are the files;

[A Prelims](#)

[B Prelims](#)

[AB Finals](#)
